Education

Instituto Superior Técnico, ULisboa Bachelor of Science in Computer Science, AVG: 17/20	Lisbon, Portugal Sep. 2024 – Jun 2027
---	--

Experience

Embedded Software Engineer, Rocket Experiment Division Instituto Superior Técnico	Sep. 2025 – Present Lisbon, PT
- Developed an STM32-based remote fueling control system for hybrid rocket operations, enabling safe operation from over 100m through a modular hexagonal architecture. - Built an internal documentation platform using MkDocs and Cloudflare Pages, automating documentation generation through a Doxygen pipeline to centralize knowledge and onboarding resources.	
Software Engineer, Técnico Investment Club Instituto Superior Técnico	Sep 2025 – Present Lisbon, PT
- Architected a low-latency HFT trading engine with modular C++ execution and decoupled strategy, market data, and order execution layers. - Redesigned trading infrastructure into a modular ETL + execution system using Docker-isolated pods per strategy for scalable execution. - Reduced website graphs load time by 75% by implementing server-side computation and LTTB time-series downsampling.	

Skills

Programming: C, C++, Python, Go, Assembly, Java, SQL
Systems: Embedded (STM32, Arduino, Raspberry Pi), RTOS
Infrastructure: Linux, Docker, Git, GitHub Actions
